

# How To Install EstiPC

This guide describes how to download and install EstiPC from the [www.estipc.com](http://www.estipc.com) web site. Follow these instructions either to download EstiPC for evaluation before purchasing or to download an update over a previous installation.

## Normal Downloading

Use your browser to go to [www.estipc.com](http://www.estipc.com) and click on the round green download arrow at the top right corner of the page. Click the arrow just once. The 'Downloads' window should appear after a short delay...

In some browsers the download progress may be shown at the top or bottom of the browser window, rather than in a popup box. If prompted, confirm you want to open or save the download.

The download should take less than a minute if you have a reasonable internet connection.

If you are prompted by another security warning mentioning an unknown publisher, choose 'Run' again. If you are then prompted by the 'User Account Control' screen, choose 'Yes' to allow the installation to make changes. Don't worry, we're good guys!

## Alternative Downloading

After clicking the green download arrow on [www.estipc.com](http://www.estipc.com) you may be prompted to 'Save' the download, rather than 'Run'. Click 'Save' and choose the desktop if you are prompted for a location.

Run the installation from this location once the download has completed.

## EstiPC Updates

If you already have EstiPC installed and you're downloading an update, it's important to make sure EstiPC is not running before you start.

If you have any EstiPC projects open, use the File / Exit menu to fully quit the application.

If you're updating, your previous projects, data and settings will be retained.

## Standard User Accounts

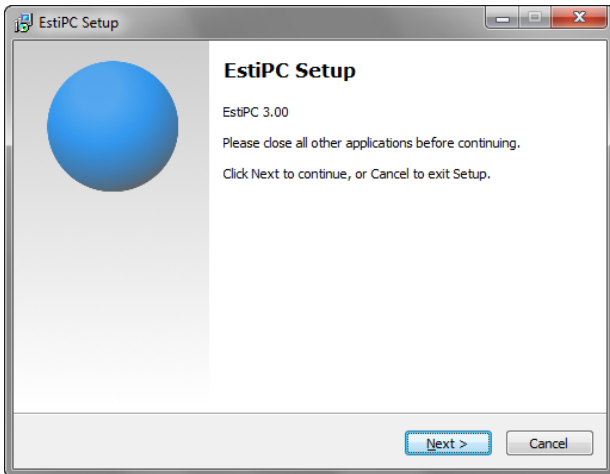

If you're using a standard (non-administrator) user account you'll be prompted at various stages to select an administrator user name and enter a password.

If you use Windows XP and you're just told that you need to be logged on as an administrator, follow the 'Alternative Downloading' procedure described below and save EstiPC-Setup to your desktop. Right-click the EstiPC-Setup desktop icon, select 'Run as...' then select an administrator user name and enter a password.

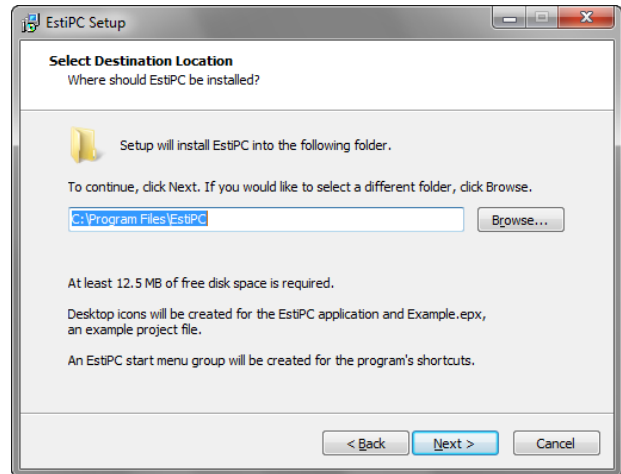

If you don't know an administrator user name and password you'll need to ask an administrator to do the EstiPC installation.

## Running EstiPC Setup

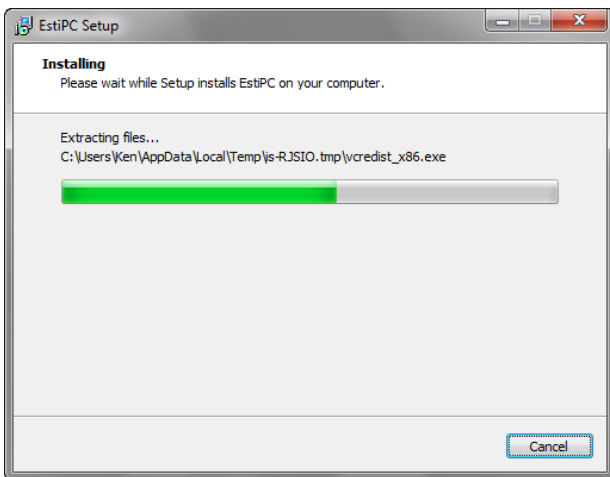

The EstiPC Setup follows a series of steps as shown below...

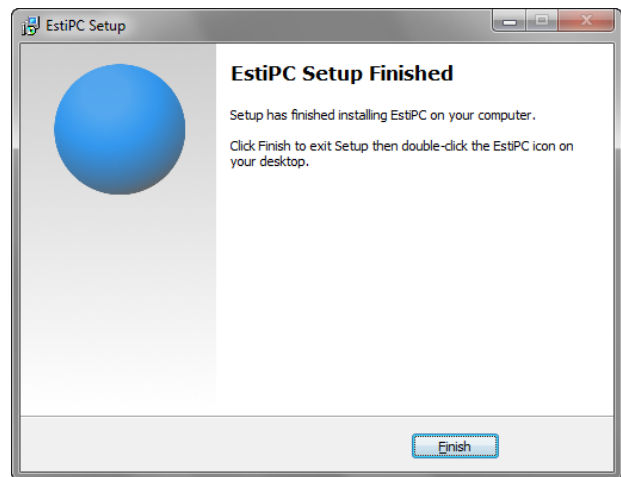

Step 1... click 'Next' to continue.

Step 2... click 'Next' again.

Step 3... wait, there may be a delay.

Step 4... click 'Finish'.

## Starting EstiPC

After installation is complete, double-click the EstiPC icon on your desktop. You may need to move or minimise your browser to find the icon.

An EstiPC icon group will also be installed on the start menu within 'All Programs'.

### Demo Mode

If you've installed EstiPC for the first time it will initially start in 'Demo Mode' and automatically open an example project. You'll be able to do everything except save changes.

If you're a new user we can offer a free one month trial so that you can fully evaluate the software and check it meets your requirements.

To start the free trial you'll need to tell us your 'Computer ID' which you can find by running EstiPC, clicking the Tools / Options menu and selecting System. Email the 'Computer ID' to [contact@estipc.com](mailto:contact@estipc.com) and we'll send you a corresponding 'Access Code' which will unlock the software for the trial period.
